SOFTWARE ENGINEER

I am a junior Software Engineering student with a strong interest in mobile application development, web development, and full-stack technologies.

PROFESSIONAL EXPERIENCE

Outlier

Freelance Artificial Intelligence Trainer

Dec 2024 - Present

San Francisco, USA

Developed prompts for AI to generate code in various programming languages, including Java, Python, Verilog and C++. Validated AI-generated outputs and ensured accuracy and functionality. Corrected errors and improved AI responses based on thorough validation.

Robot El Derneği

Data Reporting Analyst / Intern

Aug 2024 - Present

İstanbul, Türkiye

Collecting, analyzing, and reporting project data; analyzing feedback and preparing improvement suggestions; tracking project progress by preparing regular reports; determining how project data should be stored at Robotel Association and researching alternative learning methods for statistics that are not kept in Turkey.

Saat Teknoloji

Back-end Developer / Intern

Jul 2024 - Aug 2024

Kastamonu, Türkiye

Working on the backend development of a live streaming and program viewing platform for films, series, and TV channels, utilizing EPG correction technology. Implementing a keyword-based search function on the platform by integrating Elasticsearch with Java Spring Boot.

PROJECTS

Elasticsearch Word-Based Search Backend | Java, Spring Boot, Elasticsearch

Github link

Designed a backend using Elasticsearch to enable word-based searches in video subtitles, providing precise time intervals for spoken words. Ideal for platforms with subtitle-integrated content like films and live events.

-During my internship at Saat Teknoloji Company.

Cargo Delivery Simulation Program | Java

Github link

Simulated cargo delivery operations for a shipping company using custom Java implementations of doubly linked lists, stacks, and queues. The program modeled resource management and mission execution between distribution centers.

-For “Data Structures and Algorithms” course. Final grade of **100%**

Online Reservation System for Restaurants | Java

Github link

An online reservation system for restaurants using Java and JavaScript.

-For “Database Systems” course. Final grade of **93%**

-Led a team of 4: organized meetings and delegated tasks.

-Implementing CRUD operations through SQL.

Hospital Database Manager | Java

Github link

Implemented a hospital database system using binary search trees (BST) for efficient data organization and retrieval, fully developed in Java without external libraries.

-For “Data Structures and Algorithms” course. Final grade of **80%**

Sorting Algorithm Detective: Execution Analysis | Java

Github link

Conducted runtime analysis of five sorting algorithms from a provided library, identifying each algorithm based on time complexity and experimental data, with results documented in a detailed report.

-For “Data Structures and Algorithms” course. Final grade of **100%**

Sorting Algorithm Mastery: Step-by-Step Implementation | Java

Github link

Developed sorting algorithms from scratch to deepen algorithmic understanding without external libraries, emphasizing step-by-step implementation and hands-on practice.

-For “Data Structures and Algorithms” course. Final grade of **100%**

SKILLS

Programming | Java, Javascript, Python

Web&Database | HTML, CSS, MySQL

Tech | Git, VSCode, Eclipse, IntelliJ, MS Office

Language | Turkish, English (high advanced), German (advanced)

EDUCATION

TED University 2022-Present

Software Engineering
Ankara, Türkiye

Göl Anadolu High School 2019-2021

Kastamonu, Türkiye
GPA: 92/100

Seven Lakes High School 2018-2019

Houston/Texas, USA

EXTRACURRICULAR ACTIVITIES

Web Team Member

Google Developers Group TEDU

Public Relations Team Member

Google Developers Group TEDU

Project and Competition Team Member

TEDU AI & Data Science

Vice President

Interact Club Kastamonu

Volunteer Supplier

2017 Texas Hurricane Harvey
